Project Title	Exploration of the Gender and Ethnicity Bias Standardized Patient Raters of Objective Structured Clinical Skills Examinations
Project Description (Brief)	Focus of Project: Students deserve an equitable learning environment that provides opportunities to learn and to demonstrate their learning. Students from racial and ethnic groups underrepresented in medicine (URiM - defined as any mention of American Indian/Alaska Native, Hispanic, Vietnamese, Black/African American, Native Hawaiian) and certain genders may face inequities in the assessment of their clinical skills. The primary focus of this project is to explore the relationship of the gender and ethnicity of standardized patient raters of objective structured clinical skills examinations (OSCEs) with the clinical skills performance students at the University of Colorado School of Medicine (CUSOM) in relation to identified gender and URiM status. Project & Assessment Design: GOAL: To determine if there are relationships in the gender and ethnicity status of standardized patient raters to the gender and URiM status of the students being assessed related to their performance on objective structured clinical skills examinations (OSCEs). System in which your project will be introduced: The CUSOM has a working group focused on bias in assessment. This working group and those implementing the OSCEs at CUSOM will be very interested in these results for the improvement in clinical skills assessment at CUSOM. The results of this project explore a possible source of bias in assessment and help to identify opportunities for improved rater training. A dataset for analysis for a single class worth of data is currently being compiled and will be available by the end of 2022. What target population will your project implementation effect: Undergraduate Medical Education What is the educational focus of your project: Assessment

	What is the educational focus of your project: Assessment and Evaluation What is your scholarship plan: The draft title is an Exploration of the Gender and Ethnicity Bias Standardized Patient Raters of Objective Structured Clinical Skills Examination. The main outcome will be the presence or absence of bias in the assessment related to the gender or ethnicity of the raters used in OSCEs at CUSOM. A health professions education journal such as Medical Education or Academic Medicine would be the target journal for the project.
What are your project consult/collaboration needs?	Help with performing the analysis, interpreting the results, drafting a methods section for the analysis and helping with any edits and revisions as requested from the accepting journal.
What are your upcoming deadlines?	na
Comments	I'm adding a second cohort of students for the analysis. The data structure of the two cohorts is slightly different even though a number of the variables are the same or similar.
